

USING NAS WITH BOTH MAC AND PC

IOMEGA® NETWORK-ATTACHED STORAGE PUTS AN END TO THE AGE-OLD BATTLE—YOU CAN HAVE IT ALL!

Dueling proprietary computer formats and protocols may make for some entertaining commercials, but it certainly doesn't make for easy networking. Sharing files between a Mac® and a Windows® PC in your home or office can be quite a hassle, and adding a shared printer to a mixed environment is even more difficult. It's enough to make even the most technically savvy users think twice before installing network storage.

That's why Iomega designed its StorCenter™ products to work seamlessly in networks that have PCs, Macs, or even Linux computers. In fact, any computer in your home or business can share and access files on the StorCenter. What's more, you can connect a printer to your StorCenter and share it among all network computers.

With Iomega StorCenter products with built-in EMC Lifeline software, you get support for all different network file protocols. They include:

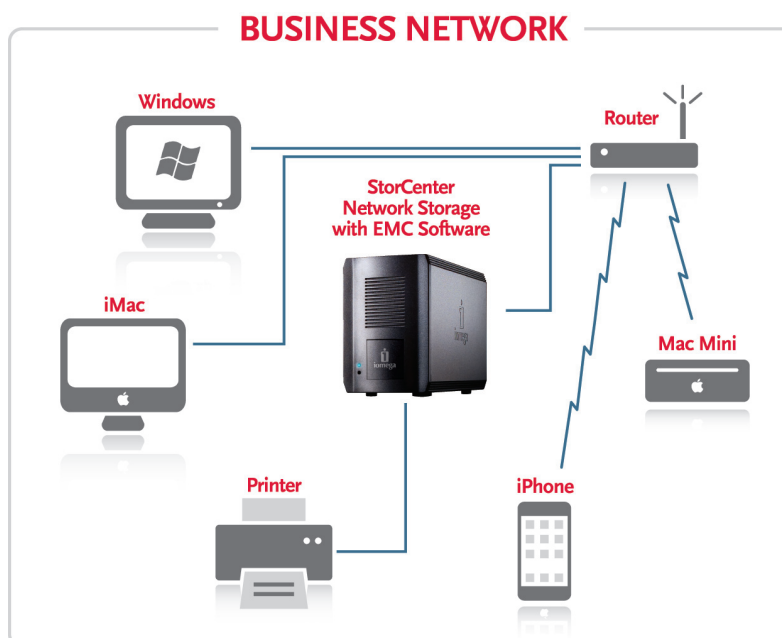

- Microsoft (CIFS/SMB/Rally)
- Mac (AFP/Bonjour)
- Linux/Unix (NFS)
- HTTP
- FTP
- SNMP

There's no need to select just one protocol. Now you can choose the computers you prefer, without worrying about compatibility

with your StorCenter. Mac, Linux or PC—with our easy client software, they all *just work!*

The Iomega® StorCenter™ family of NAS storage solutions blends award-winning EMC storage and security technologies with easy-to-use configuration and management tools purpose-built for small businesses and remote offices. Learn more about Iomega NAS solutions at www.iomega.com/NAS.
