

## HOW TO: TORRENT

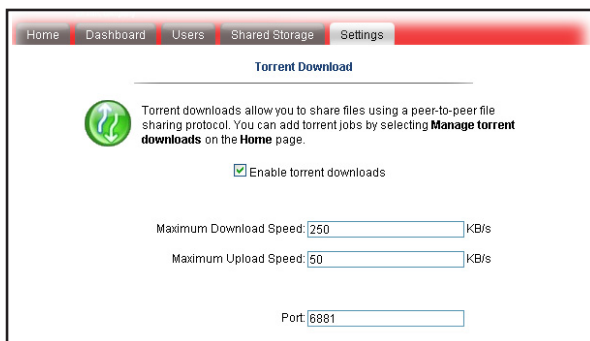

### DOWNLOAD SOFTWARE AND MOVIES TO YOUR IOMEGA® NAS DEVICE

**SITUATION:** My friends are all raving about a new movie, and I want to see it. And great news, it's available as a legal torrent download. Now I want to download it to my device and start watching it.

#### SET UP TORRENT DOWNLOAD ON YOUR NAS DEVICE

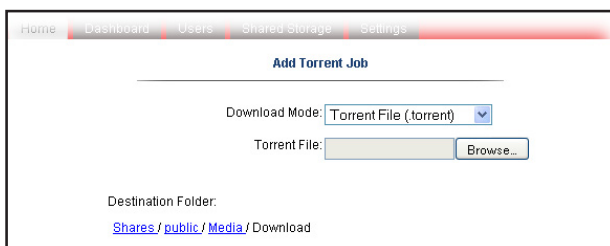

Your Iomega StorCenter™ NAS device allows you to download torrent files and upload them to peers. Torrent download setup is simple to enable. Open the StorCenter Manager, navigate to the **Settings** tab, and click **Torrent Download**. Check the **Enable torrent downloads** checkbox.

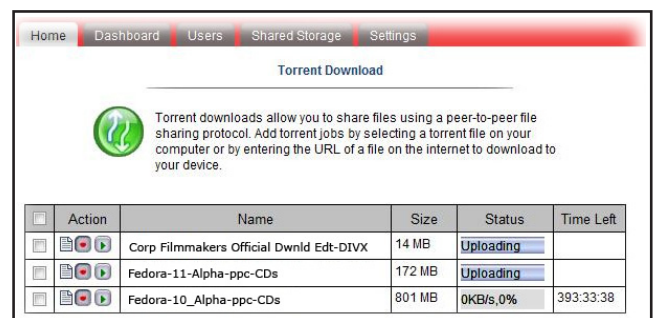

You should typically leave Maximum Download Speed and Maximum Upload Speed at the default values; adjusting these values can affect the performance of your Iomega StorCenter NAS device. In addition to configuring your StorCenter Manager, you also want to configure your home router to allow port forwarding on port 6881.

#### DOWNLOAD THE TORRENT FILE TO YOUR NAS DEVICE

To begin downloading the torrent file to your device, access the Torrent Download page of the StorCenter Manager by navigating to the **Home** tab and clicking **Manage torrent downloads**. On the Torrent Download page, click **Add**.

On the Add Torrent Job page, click **Browse** to find the torrent file you downloaded to your computer, or enter the URL of a torrent file on the internet. The StorCenter Manager lets you know the torrent job has been successfully added. The torrent job is added to a table of torrent downloads, and the Time Left column lets you know how long it will take to download the torrent file.

After the file has successfully downloaded, it automatically begins to upload to other peers. You may also delete a torrent job, the associated files, or both if you choose.

The Iomega StorCenter family of NAS storage solutions blends award-winning EMC® storage and security technologies with easy-to-use configuration and management tools purpose-built for small businesses and remote offices.
