Sync back files when you plug your hard drive back into your primary PC, so your files are always up to date. Iomega v.Clone is a cutting edge technology— no one else can offer this powerful solution. v.Clone software is perfect for use:

- ▶ **At Work**— Work at your home computer and your computer at the office and easily access the same email, data, and office applications from your external hard drive. Take only your hard drive when you travel without the hassle of packing an entire laptop.
- ▶ **Just for Fun**— Take your games or media collections to access on a friend's computer or at school, plus use any media applications when you travel.

**CLONE IT** Take your operating system, files, settings, and applications wherever you take your external hard drive! Iomega's powerful v.Clone software makes a virtual copy of your PC including your operating system, applications, email programs, bookmarks, games, and media (PC only) on your Iomega external hard drive.

**USE IT** Perfect for computer users who own multiple computers and want access to their computer system and applications wherever they go, especially netbook users with limited internal hard drive space. Plug your Iomega hard drive into another PC and enjoy using your applications including office software, email programs, games, and browser favorites. Easily access, edit, and save files to your hard drive. No data is left behind on the secondary computer, so your files are kept secure.

**SYNC IT** When you return to your primary computer, sync your entire *My Documents* folder back so you are always up to date with the latest changes. Plus, as an added level of protection, if your primary PC crashes, you will have an emergency copy of your computer so you'll never be down and out.

### What's Unique About Iomega v.Clone Technology

Iomega v.Clone technology is truly one of a kind. This cutting edge technology, developed by EMC® utilizing VMware® technologies, lets you take your PC in your pocket, wherever you go on virtually any computer.

v.Clone is the only solution of its kind, allowing you to access your primary computer's Windows OS\*\*, apps and personal settings, directly from your Iomega external hard drive, via a secondary computer.

v.Clone is the first product designed for individuals to move seamlessly back and forth between a physical environment (home or office PC) and a virtual environment (Iomega Hard Drive connected to any PC). This allows the user to have a complete, usable virtual copy of their physical PC with them at all times.

v.Clone keeps your data in sync between your primary and secondary computer. v.Clone syncs documents between your computer and the clone every five minutes, so your virtual environment is ready to go at a moment's notice.

### What is a Clone?

A clone is a disk image file that contains all of your files, applications, and operating system. In essence, a clone is a functioning copy of your computer's environment.

You can clone everything on your C: drive including operating system, applications, email bookmarks, and media, plus you can configure v.Clone to automatically update the clone on a weekly or daily basis.
